DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted 12/22/03 under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 3 is objected to because of the following informalities: line 2: insert --on-- after "provided". Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 4, 9, 14, 19, 24, 29, and 34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 4 recites the limitation "the stopping member" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3765

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawashima et al. (Kawashima, U.S. 5,950,248). Kawashima discloses the invention as claimed. Kawashima teaches protective goggles comprising a frame body compositely formed with a rigid frame member 3 and a resilient frame member 2, at least one replaceable lens 1 having an outer circumferential area, and wherein the outer area abuts against the resilient frame member and engages with the rigid frame member so as to be fixed together. The outer circumferential area is provided with a flange portion 12 and a stopping portion 13 on at least a portion of a whole lens circumference, with the stopping member engaged with the rigid frame member to be fixed together. The lens 1 is extended at a portion 10 to provide a tab portion thereto. Frame member 2 doubles as a face-abutting cushion member formed in one body with and by the resilient frame member. Nose bridge member 7 connects a right side and left side of the frame body together and is formed in one body with and by the resilient frame member.

Conclusion

7. The prior art made of record on the attached PTO-892, and not relied upon, is considered pertinent to applicant's disclosure.
